CLINICAL DATA

This publication is not intended for distribution in the USA.
- Introduced in 2008, MARATHON Cemented Cups utilise the cross linked polyethylene successfully used for over 10 years as a modular liner in the DURALOC and PINNACLE acetabular systems.\textsuperscript{1,8}

- MARATHON cross-linked polyethylene has been shown to be significantly more resistant to wear compared to non-crosslinked polyethylene - in 41 cases, Stone et al achieved 100\% survivorship at 5.2 years with 83\% reduction in wear versus ENDURON\textsuperscript{™}.\textsuperscript{7}

- The fixation features and bearing surface (bore) geometry of the MARATHON Cemented Cup are the same as the LPW version of the CHARNLEY\textsuperscript{®} Ogee, CHARNLEY & ELITE PLUS Ogee CUPS.

- The original C-STEM\textsuperscript{™} implant established a tapered slip stem that not only worked with the bone cement mantle, but was also designed to produce positive proximal bone remodelling due to more anatomic stress distribution.\textsuperscript{2}

- C-STEM & ELITE PLUS Ogee\textsuperscript{®} cemented cup is shown to have a 97.2\% survival rate at 12 years in over 4,700 cases.\textsuperscript{3}

- Sochart et al in 2009 noted that in their patient series follow up they noticed “There was no evidence of negative bone remodelling” which is an issue seen with other cemented stems.\textsuperscript{4}

- Uses ENDURON UHMWPE material unchanged since launch in 1994 with excellent clinical survivorship.\textsuperscript{2}

- Available in 5 Outer Diameters 40 mm / 43 mm / 47 mm /50 mm / 53 mm in Unflanged LPW, Flanged LPW and Ogee LPW designs for 28 mm and 32 mm head sizes.

- Design and fixation features same as the successful CHARNLEY LPW range of cemented cups.

- With nearly 15 years clinical use the PINNACLE\textsuperscript{®} Acetabular Cup System is DePuy Synthes’ premium Acetabular system.

- PINNACLE Acetabular Cup System offers surgeons the ability to address existing pathologies whilst choosing from MARATHON\textsuperscript{™} or ALTRX\textsuperscript{™} cross linked polyethylene or CERAMAX\textsuperscript{™} ceramic liners.

- 10 years data in combination with the original C-STEM (95.6\% at 10 years) in the AOANJR\textsuperscript{®} and 10 year data with C-STEM AMT in the NJR.\textsuperscript{3}
Launched in 2005* the C-STEM AMT has been provided to patients in over 85,000 total hip replacements Worldwide with 41,000 in the UK alone.9

* C-STEM AMT standard and high offset stems launched in 2005.

In 2016 the C-STEM AMT Total Hip System was awarded an ODEP 10A rating by the Orthopaedic Data Evaluation Panel.10

98.65%3

C-STEM AMT AND MARATHON™ cemented cup is shown to have a 98.65% survival rate at 7 years in over 4,400 cases.3 In combination with the PINNACLE cementless cup it is shown to have a 95.36% survival rate at 10 years in over 5,800 cases.3
